## **Exercise 2: Designing Entities Automobile Registered with the Motor Vehicle Department**

David Bishop | June 6, 2022

The Driver table stores personal info about the driver, their name, address, postal code, and their birth date. Each driver is also assigned their own id(PK) and in the table a licence id(FK) can be found that corresponds to it's own table. The licence table has data about the driver's licence, the expiry date, class and an image of the licence.

PΚ licence id serial expiry date date class charvar(10) image bytea

The Registration table, has it's own id(PK) for each registration and a slip type (Because you get a certain slip or something by registering, I don't know much about that haha), the amount paid and the expiry date. The Reg table also has a driver id(FK) which stores personal info about the driver and their licence. Req table also has a vehicle id(FK), which stores data about the correspondence vehicle, the manufacturer, model, type of vehicle, the year and colour.
